Scanner :

➢ The java Scanner class is used to read the various types of input from the console at the runtime

➢ Scanner class present in java.util package.So by importing that package we can use Scanner class.

➢ Syntax or creating scanner object

Scanner scan=new Scanner(System.in);

➢ System.in is an Input stream which is typically connected to the input of console program

➢ Scanner class has methods like next() is used to return the next input value.

➢ Syntax of next method is : **int input=scan.nextInt();**

float input=scan.nextfloat();

String input=scan.nextString();
